

**See what our
customers are saying:**

Project Solutions is...
"always responsive to the Government's requirements regardless of how much time or short notice was given in needing Inspectors".

Our employees are...
"always professional, knowledgeable and always willing to do whatever was required in getting the job done while representing the AF position/direction".

The Inspectors also provide "effective and useful feedback and information both when asked and when they felt that the input would be beneficial to the situation."

"Inspectors always provide input and recommendations in resolving issues as well as performing research when required".

Title II Construction Inspection Services

One of our most recent large projects called for inspection service/quality assurance that covered every element of the conversion of the Base Education building and the renovation of the Base Recreation center. These projects resulted in the conversion of three buildings to create the Air Force Finance Center. These projects were fast track, design build task orders awarded to a large California based design/construction firm. They utilized multiple subcontractors, a design team spread across the United States and we were awarded the contract by the Air Force Civil Engineering Support Agency.

The Construction Management Team performs all the services required for daily surveillance and inspection during the progress of the construction up to the completion and final inspection of the Project

Project Solutions Inc was selected by the Air Force for its ability to provide design review, quality control inspections coupled with detailed reports, quality assurance oversight of the contractors quality control and safety plans, and our ability to blanket cover the widely diverse individual work elements contained in the project. We joined the project at the 65% design phase and were completely involved until the final inspection was accomplished nearly 18 months later.

Throughout performance on the project PSI provided on-site inspection for all trades, monitored testing while documenting rejections and observing corrections/ re-performance for contractual compliance. AF and contractors were immediately notified of any issues involving safety, installation of non-complying items, or deviations from the Quality Control plan established by the contractor.
